A. Inputs Used For Assets Measured At Fair Value

(1) Fair Value Measurements by Levels 1, 2 and 3

The Company has categorized its assets that are measured at fair value into the three-level fair value hierarchy as reflected in the table below.

Level 1 - are liquid investments traded in active markets and valued based on unadjusted quoted prices. Assets in this category are preferred and common stock securities.

Level 2 - The securities that fall into this category are bonds, preferred stocks, common stocks and call options which are not exchange traded. These securities are valued based upon models with observable inputs - for example market interest rates, credit spreads etc. They may have been determined by independent pricing services using observable inputs.

Level 3 - are investments valued based upon models with ""significant"" non-observable inputs (assumptions). Such assumptions can be about loss severities, prepayment speed, interest rate volatilities, earnings forecast, comparables sales etc."

(3) Policy on Transfers In and Out of Level 3

At the end of each reporting period, the Company evaluates whether or not any event has occurred or circumstances have changed that would cause an investment to be transferred in or out of Level 3.

(4) Inputs and Techniques Used for Level 2 and Level 3 Fair Values

Bonds carried at fair value categorized as Level 2 were valued using a market approach. These valuations were determined to be Level 2 valuations as quoted markets prices for similar instruments in an active market were utilized. This was accomplished by the use of matrix pricing. Matrix pricing takes quoted prices of bonds with similar features that are inputs into the analysis included duration, credit quality, tax status and call and sinking fund features.

Common stocks carried at fair value categorized as Level 2 were valued using a market approach. These valuations were determined to be Level 2 valuations because quoted markets prices for identical instruments trading in an inactive market were utilized. When an equity instrument is illiquid due to limited trading activity, the use of quoted markets prices for identical instruments was determined by the Company to be the most reliable method to determine fair value.
