### 20. Fair Value Measurements

#### A. Fair Value Measurement

The Company's financial assets and liabilities carried at fair value have been classified, for disclosure purposes, based on a hierarchy that prioritizes the inputs to valuation techniques used to measure fair value into three broad levels. The hierarchy gives the highest priority to fair values determined using unadjusted quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to fair values determined using unobservable inputs (Level 3). An asset's or liability's classification is determined based on the lowest level input that is significant to its measurement.

For example, a Level 3 fair value measurement may include inputs that are both observable (Levels 1 and 2) and unobservable (Level 3). The levels of the fair value hierarchy are as follows:

- Level 1: Inputs are unadjusted, quoted prices for identical assets or liabilities in active markets at the measurement date.
- Level 2: Inputs are other than quoted prices included in level 1 that are observable for the asset or liability through corroboration with market data at the measurement date.
- Level 3: Inputs are unobservable and reflect management's best estimate of what market participants would use in pricing the asset or liability at the measurement date.

Fair value of actively traded fixed-income and equity securities is based on quoted market prices. Fair value of inactive traded fixed-income securities is based on quoted market prices of identical or similar securities based on observable inputs like interest rates using a market valuation approach is generally classified as Level 2. Investments measured based on the practical expedient being net asset value (NAV), based on the NAV of the fund as provided for in the audited financial statements and other fund reporting, are generally classified as Level 3.
